## **Practical-4**

# Deploy the Machine Learning Model using Flask and Docker.

**Task 1:** Install the required libraries

```
pip install Flask
pip install gunicorn
```

**Task 2:** Follow the steps described in theory material to deploy the model using Flask. Run the flask application to execute the deployed model.

#### Flask Code:

**Task 3:** Create the docker file using the steps described in theory material.

#### **Docker File Code:**

```
FROM python:3.8-slim
WORKDIR /app
COPY . /app
RUN pip install --trusted-host pypi.python.org -r requirements.txt
EXPOSE 80
ENV NAME World
CMD ["python", "app.py"]
```

#### **Task 4:** Create the Docker Image

docker build -t dockerfile.

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker build -t dockerfile .

[+] Building 25.5s (9/9) FINISHED

=> [internal] load .dockerignore

=> => transferring context: 2B

=> [internal] load build definition from dockerfile
```

Task 5: Create the Docker File

```
What's Next?

View summary of image vulnerabilities and recommendations → docker scout quickview

PS D:\SEM 7\ML-OPS\Practical\practical> docker run -p 4000:80 dockerfile
```

Task 6: Check Performance

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
